

Internet security

Who is trying to get to you?

Internet security

Who is trying to get to you?

Introduction

This week's workshops theme is Internet security. The aim will be to develop four articles to create a manual. This manual's target younger people who will work with IT and networks as well as individuals using Internet for shopping, reading e-mails etc.

Presentation on the SIFA-site

Each group will produce three instruction sheets (the manual) regarding the one security aspect that is given to your group. The information will be put together using the provided template. It includes "headlines" as a suggestion for each square, but you can have some of your own ideas as well. At the end of the SIFA meeting in Vänersborg each group will give a 5-10 minutes presentation on the subject.

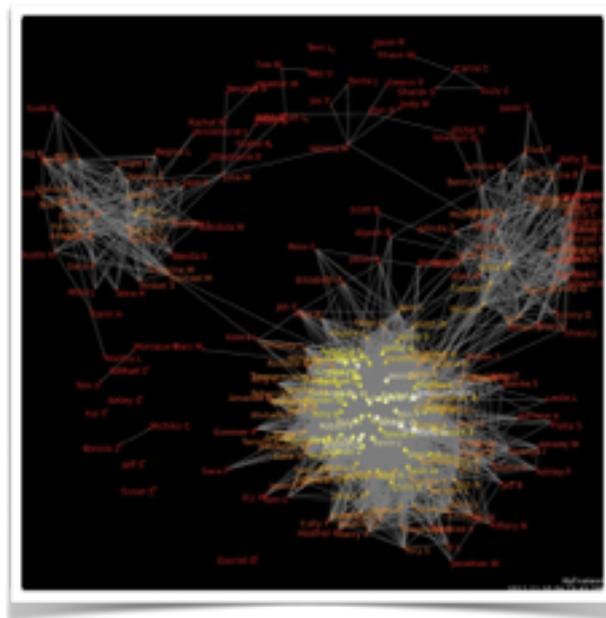

Intention

The intention of the task is to spread knowledge and the importance of understanding Internet Security in our schools.

Group 1: Governmental Institutions

If you work for a governmental institution, what security issues do you have to be aware of? Give some suggestions and links that can be helpful to understand the threats and different solutions to the problems presented. It would be useful if you could write about some real cases and some history in your subject as well.

Group members	Name	Country
●	Simon	Austria
●	Anita	Norway
●	Karolina	Poland
●	Odysseas	Greece
●	Adam	Sweden

Group 2: The company

If you work for a large company what will be the threats? Investigate what security issues the company can face e.g. regarding industrial espionage. Give some suggestions and links that can be helpful to understand the threats and different solutions to the problems presented. It would be useful if you could write about some real cases and some history in your subject as well.

Group members	Name	Country
●	Sandra	Austria
●	Atle	Norway
●	Sara	Poland
●	Pavlos	Greece
●	Leon	Sweden

Group 3: Private person

If you receive an unknown email with a link, what do you have to consider before you click on the link? Investigate what security issues you can face as a private person, regarding e.g. personal information, photos etc. Give some suggestions and links that can be helpful to understand the threats and different solutions to the problems presented. It would be useful if you could write about some real cases and some history in your subject as well.

Group members	Name	Country
●	Andreas	Austria
●	Malene	Norway
●	Adrian	Poland
●	Antonis	Greece
●	Lovisa	Sweden

Group 4: Banks and payments on the internet

If you as a private person handle money, payments or money transfers on the Internet, what can be a problem? Investigate what security issues there can be regarding e.g. Internet payments, bank accounts etc. Give some suggestions and links that can be helpful to understand the threats and different solutions to the problems presented. It would be useful if you could write about some real cases and some history in your subject as well.
